

# INTELLIGENT KNOWING FOR SCIENCE

## Knowing You with What Can Be You

What knows you is quantum reality being known as you. What can be you is that reality being known with why you choose to know you. You know it as quantum entanglement, but it is actually the quantum knowing why to know you that creates the reality you are known to know.

Reality is knowing which knows and knowing is time being known as you. Time is knowing that knows you.

Recursion precedes why to know you. Recursion yields knowing of what is you, what is not you, what is still to know you, what you know to know you, and why you want to be known as you.

Knowing what is about to be is the future. Knowing what began as you, married with why you know to be you, is the past. Knowing what you are about to be is the Now.

The Now is you and not you. It is the knowing of you to know who you can begin to know as you and it is the knowing of what is about to be known as what knows you.

Consciousness, intuition, utilized ascension of what knows to know you, recursing with knowing of what began to be, and evolution of what can know that which is knowable starts with the knowing of you. Consciousness is captured knowing of what wanted to be.

Knowing as who belongs being you is the crux of quantum mechanics. Who you can be is known and unknown. You know you as what became you when you are still about to be you. Similarly, quantum knowing, the mechanics of what is about to be, becomes known with you to encourage you to decide to be known as it.

We know who we are at our beginning. We know who we became and who we are about to be. We know that we know. Why we know is the key to quantum mechanics for we are knowing as time and we are time that knows.

Recurring with time-that-knows is time-that-knows why-to-know. In fact, time is an arrangement of what knew you and what is about to be you, recursing with The Known You that began in your first lifetime. What began is the knowing that knows to know you.
